UX Problem

I have a list of CVs spanning from 2018 to 2026. When applying to a company, I need to select a CV from the list and click Next.

However, when the list is long, the Next button is positioned at the bottom of the popup. This forces me to scroll through the entire list before I can proceed, even when my selected CV is already visible at the top.

Keep Selected CV at the Top (pinned)

Once a CV is selected, move or pin the selected CV to the top of the list. This makes the user's current choice immediately visible.

Add Delete

Allow users to delete unnecessary or outdated CVs from the list. This keeps the CV library clean and reduces unnecessary scrolling.
